

# Invitation - Conference

## Standards in the biomedical technologies sector

Challenges and opportunities for the national market!

26 September 2012 / Chamber of Commerce

In collaboration with  
the Biohealth Cluster Luxinnovation

Linked with the priorities fixed by the government of the Grand-Duchy of Luxembourg, the National Standards Body, ILNAS, carries on a standards analysis of the biomedical technologies sector. As a first step, an inventory of the active technical committees of the biomedical technologies sector was conducted at European and International level. In parallel, an identification of national stakeholders potentially concerned was performed to establish correlations with the standards watch results.

The interests and opportunities for the national market pointed out through this analysis will be presented during the conference. A round-table with stakeholders will take place to exchange on the potential benefits to participate in standardization in the biomedical sector. In addition, in order to pursue this initiative, the options offered by ILNAS to be active in the standardization process in Luxembourg will be presented.

**Are you active in the biomedical technologies sector?**

**Interested by the evolution of the standards and their impact on this sector?**

**Willing to be informed on the standardization and its mechanisms?**

**Do not hesitate, Register now!**

# Agenda

---

8h30 Registration of the participants

9h00 **Welcome Speech**  
Pierre GRAMEGNA - Director of the Chamber of Commerce

9h15 **Presentation of the National Standardization Strategy**  
Jean-Marie REIFF - Director of ILNAS

9h30 **Overview of the biomedical sector in Luxembourg**  
Patrizia LUCHETTA - Director of Life Sciences and Technologies, Ministry of the Economy and Foreign Trade
