**ILNAS**

# National standardization strategy 2024-2030 and standardization policies of the “growth” sectors

Breakfast “Technical standardization for a Circular Economy”

27 September 2024

Jérôme Hoerold  
*Head of department – ILNAS/OLN*

**I - INTRODUCTION OF ILNAS AND EIG ANEC**

**II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES  
OF THE “GROWTH” SECTORS**

## **I - INTRODUCTION OF ILNAS AND EIG ANEC**

## **II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES OF THE “GROWTH” SECTORS**

## - ILNAS

- Public administration under the authority of the Minister of the Economy, SME, Energy and Tourism
- Creation: Law of May 20, 2008
- Legislation in force: amended Law of July 4, 2014 reorganizing ILNAS
- Total staff: 62 (September 2024)
- ISO 9001:2015 certification (Budget and administration department, OLN, Digital Trust department, Market surveillance department, BLM, OEC)

## - National Standards Body (OLN)

- Composed of 8 persons
- Close collaboration with the E.I.G. ANEC-N

- **Creation:** October 4, 2010
- **Status:** Economic Interest Group (EIG)
- **Objectives:** Promotion, awareness raising and training, applied research in the field of standardization and metrology in order to support companies' competitiveness in Luxembourg
- **Human resources:** 9 persons, including 4 employees in the standardization department (July 2024)
- **Partners:**

GOUVERNEMENT  
DU GRAND-DUCHÉ DE LUXEMBOURG  
Ministère de l'Économie

ILNAS

CHAMBRE  
DES METIERS  
Luxembourg

➔ Support for the implementation of the Luxembourg standardization strategy

I - INTRODUCTION OF ILNAS AND EIG ANEC

**II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES  
OF THE “GROWTH” SECTORS**

### Technical standardization

"Inclusive tool for performance and excellence to serve the economy"

#### PERFORMANCE

- Pillar 1 – Use of relevant technical standards
- Pillar 2 – Involvement in the standardization process

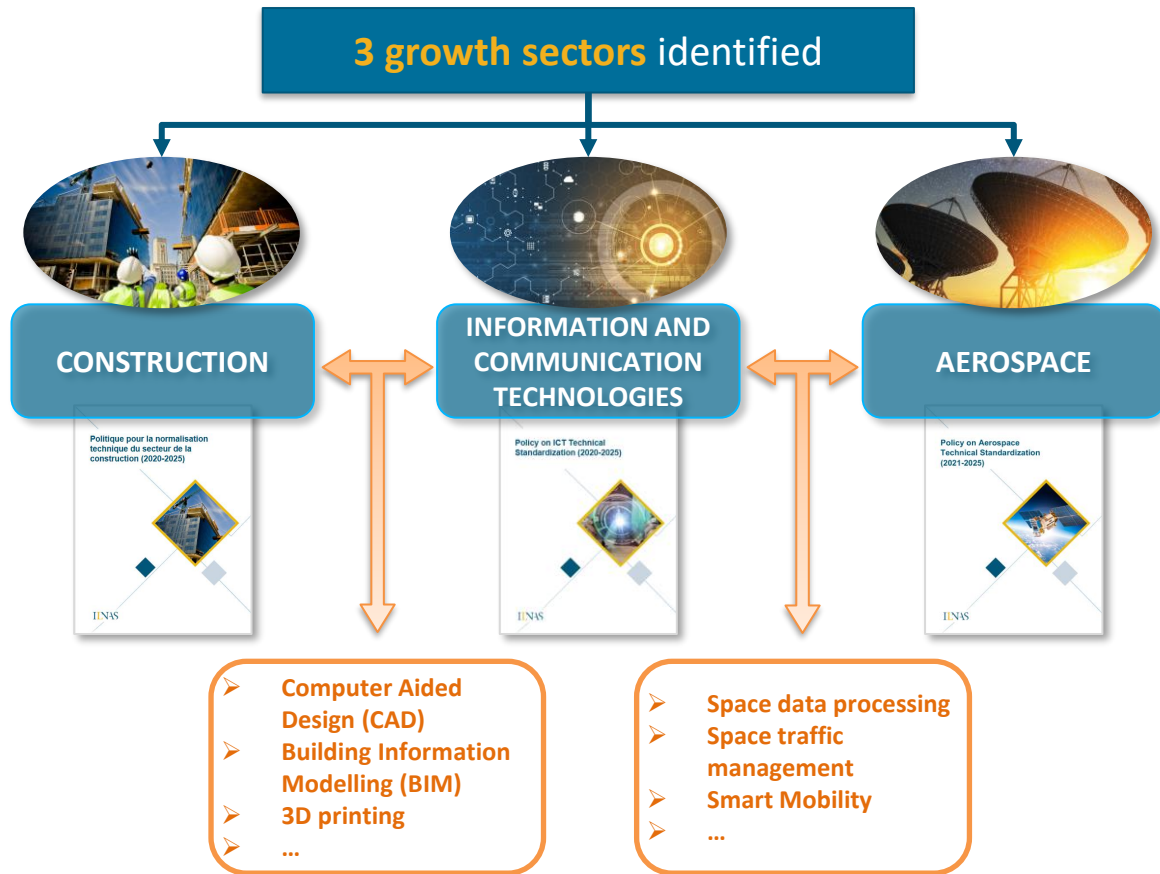

#### EXCELLENCE

- Pillar 3 – Active participation of the NSB in the European and international standardization organizations
- Pillar 4 – Development of research and education about standardization

# II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES OF THE "GROWTH" SECTORS

2024

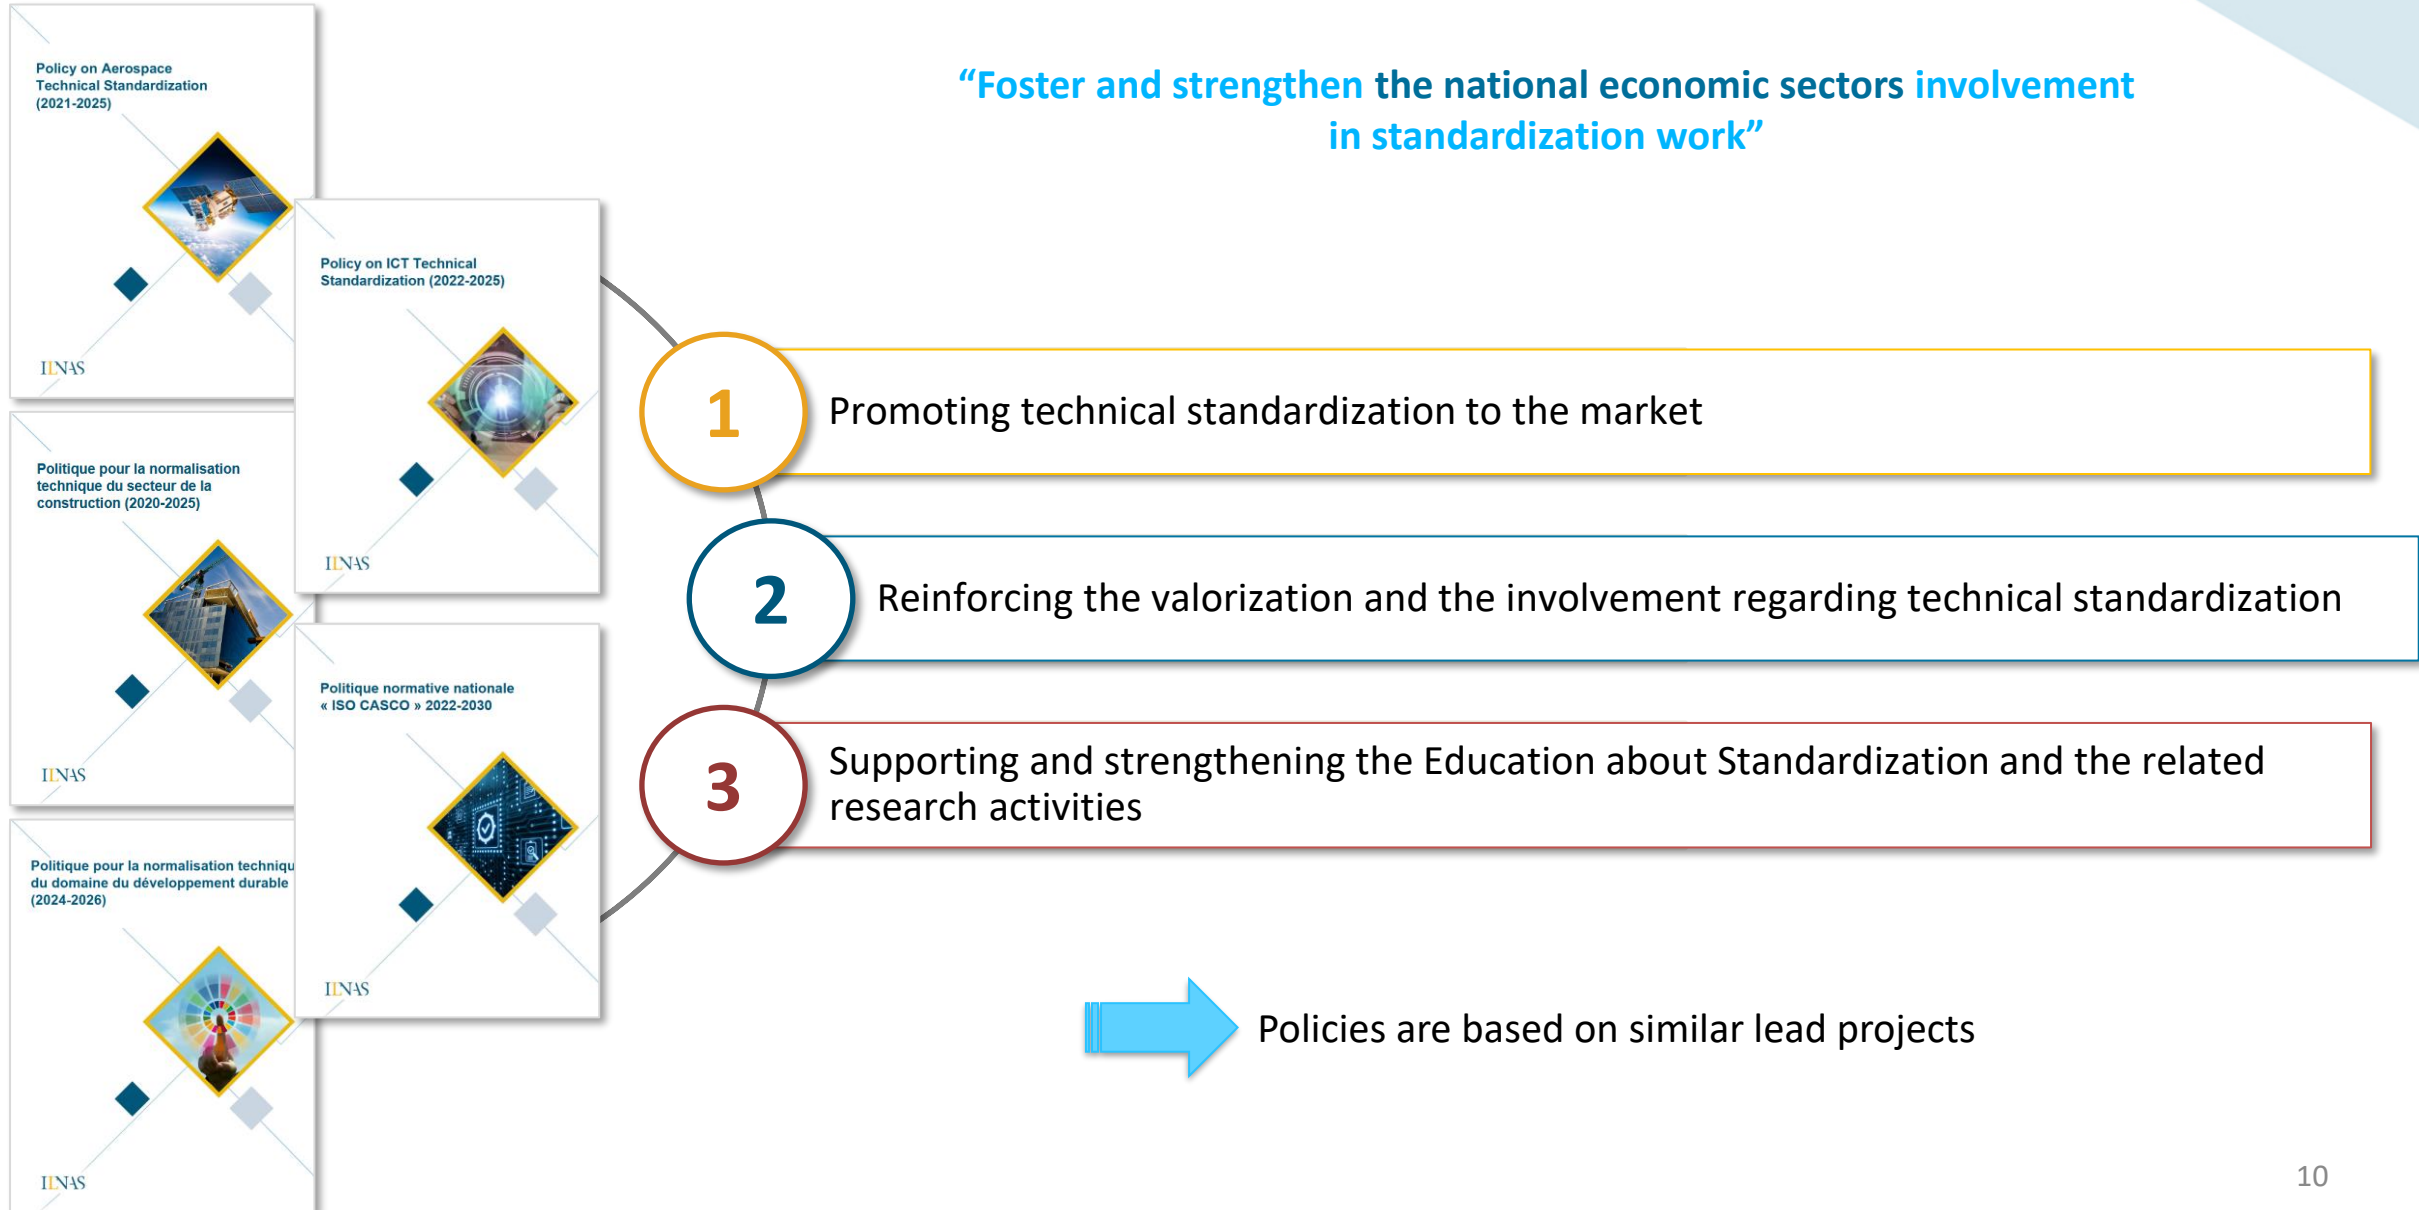

SUSTAINABILITY

2022

CONFORMITY

Identification of trans-sectoral standardization interactions

## II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES OF THE “GROWTH” SECTORS

# II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES OF THE “GROWTH” SECTORS

## Pillar 1 – Use of relevant technical standards – Some recent results/developments

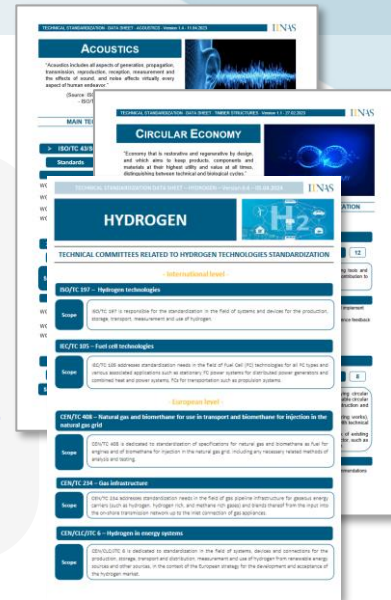

### Training catalogue

- 10 trainings/awareness sessions covering the growth sectors
- 3 “general” trainings on standardization

### Technical Standardization data sheets

- 9 for the [ICT sector](#)
- 7 for the [construction sector](#)
- 4 for the [sustainability domain](#)

### Standards Analyses

- [ICT sector](#) (April 2024)
- [Construction sector](#) (March 2024)
- [Aerospace sector](#) (July 2024)

### 2022 → 2023

- +21 % of standards sold
- +108% of licenses sold

→ 2024: new notification system in the ILNAS e-shop to implement its own standards watch

- 9 reading stations to consult standards for free

## II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES OF THE “GROWTH” SECTORS

Pillar 2 – Involvement in the standardization process – Situation in 2024

2024

→ 317 national delegates in standardization

→ 1.071 registrations in technical committees in total

### National Committee ILNAS/TC 108

Telecommunications – Vertical cabling techniques in residential and mixed-use buildings

### National Committee ILNAS/TC 109

National standard in the field of geotechnics

### National Committee ILNAS/TC 110

National Annex to the standard EN 1916 “Concrete pipes and fittings, unreinforced, steel fibre and reinforced”

INFORMATION AND COMMUNICATION TECHNOLOGIES

93 national delegates

CONSTRUCTION

157 national delegates

AEROSPACE

4 national delegates

CONFORMITY

5 national delegates

## II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES OF THE “GROWTH” SECTORS

Pillar 3 – Active participation of the NSB in the European and international standardization organizations

Participation in SDOs **General Assemblies** to represent Luxembourg’s interests

- ✓ CEN-CENELEC
- ✓ ETSI
- ✓ ISO
- ✓ IEC

Luxembourg will host the **CEN-CENELEC General Assembly 2025**

Active participation in **strategic technical committees**

- ✓ National Presidency ISO/IEC JTC 1
- ✓ National Presidency ILNAS/NSC 02 “Conformity”
- ✓ Secretariat ISO/TC 323/WG 5 “Product circularity data sheet”
- ✓ Participation in multiple Technical Committees

# II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES OF THE "GROWTH" SECTORS

Pillar 4 – Development of research and education about standardization

Research program **“Technical Standardization for Trustworthy ICT, Aerospace, and Construction”** (2021-2024) in collaboration with the University of Luxembourg

# II - NATIONAL STANDARDIZATION STRATEGY 2024-2030 & STANDARDIZATION POLICIES OF THE "GROWTH" SECTORS

Pillar 4 – Development of research and education about standardization

## Master MTECH – ILNAS in collaboration with the University of Luxembourg and the Chamber of Employees

### PROGRAMME

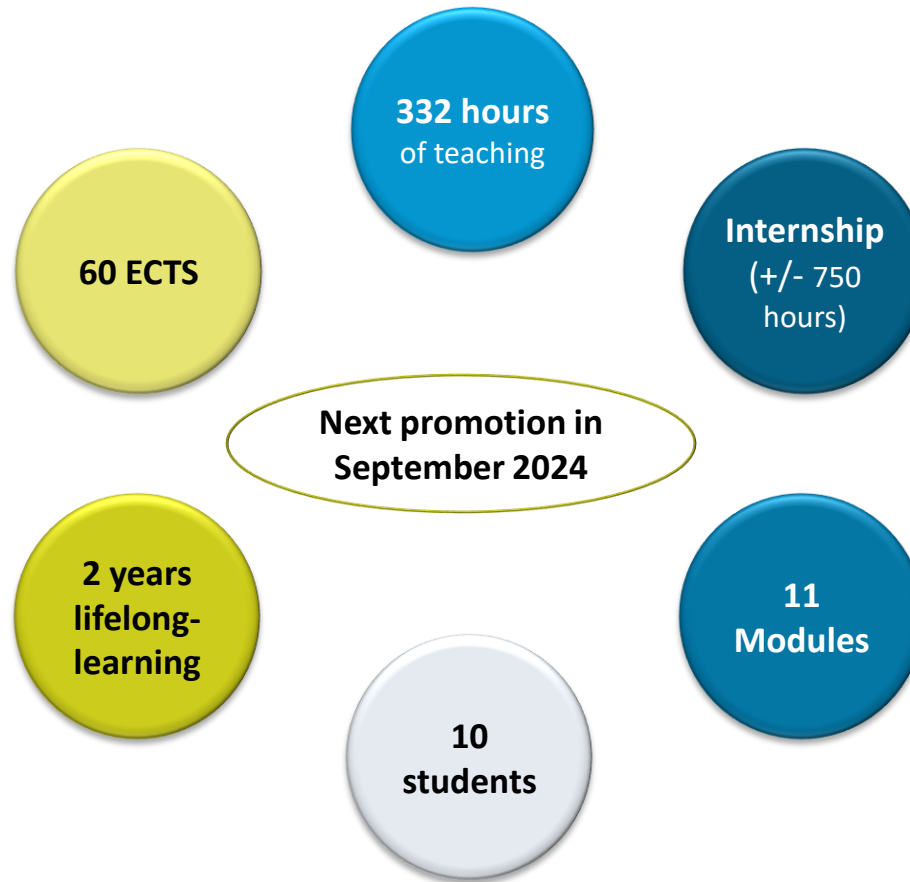

STANDARDISATION	ECTS
Smart Secure ICT and Innovation	1
Technical Standardisation	3
<b>TOTAL</b>	<b>4</b>

SMART ICT	ECTS
Smart ICT Technologies I	5
Smart ICT Technologies II	5
<b>TOTAL</b>	<b>10</b>

## Latest developments at ILNAS in the area of sustainability

Breakfast “Technical standardization for a Circular Economy”

27 September 2024

Lucas Cicero

*Project officer – ILNAS/OLN*

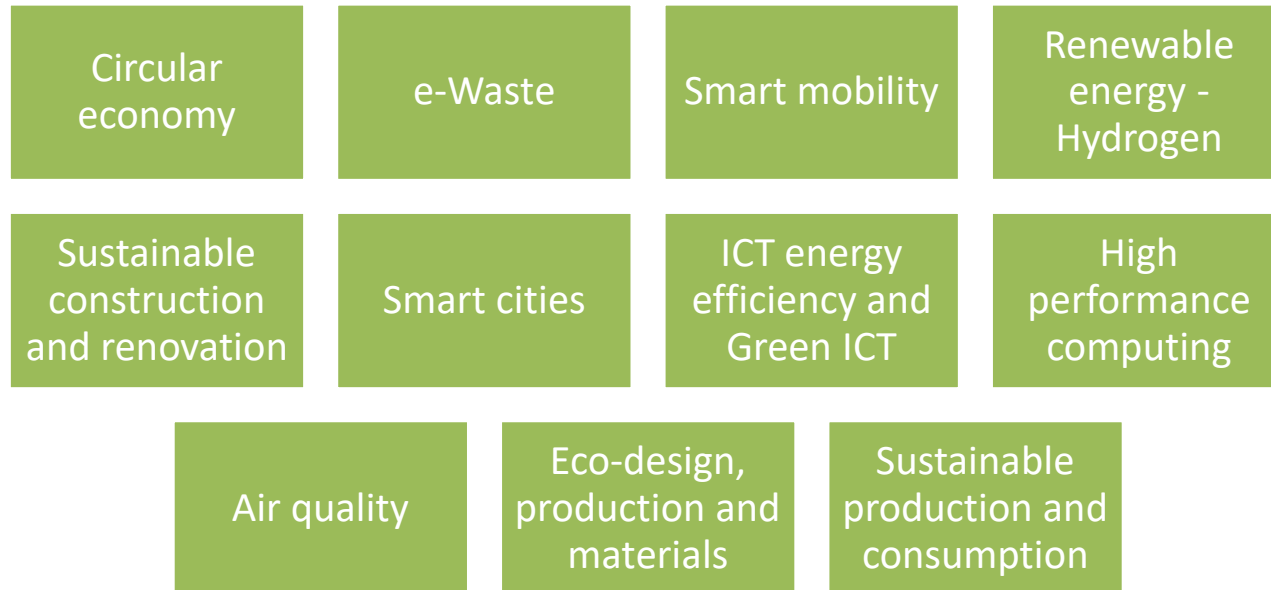

- I. **HISTORY**
- II. NATIONAL STANDARDIZATION POLICY
- III. ILNAS' LATEST DEVELOPMENTS

In July 2023, ILNAS produced an analysis tackling the « *Sustainability and technical standardization* » thematic, addressed across two perspectives:

**- Environment**

**- ICT and sustainability**

By identifying the crossroad between standardization and national strategies, 11 sub-axes are currently developed by ILNAS :

60 technical committees currently followed

- I. HISTORY
- II. NATIONAL STANDARDIZATION POLICY**
- III. ILNAS' LATEST DEVELOPMENTS

Politique pour la normalisation technique  
du domaine du développement durable  
(2024-2026)

**1**

### Promoting technical standardization

- Identification of national needs in term of standardization
- Issue the identification of key-standards for each sub-axes
- Dissemination and promotion of normative informative to the stakeholders

**2**

### Reinforcing the valorization of standardization and the involvement of stakeholders in order to support sustainable development goals

- Follow-up of relevant technical committees
- Execute a regulatory watch, related to standardization
- Promote the involvement of national market to the different technical committees and the utilization of identified standards

**3**

### Supporting innovation through standardization, research and education

- I. HISTORY
- II. NATIONAL STANDARDIZATION POLICY
- III. ILNAS' LATEST DEVELOPMENTS**

1

Promoting technical standardization

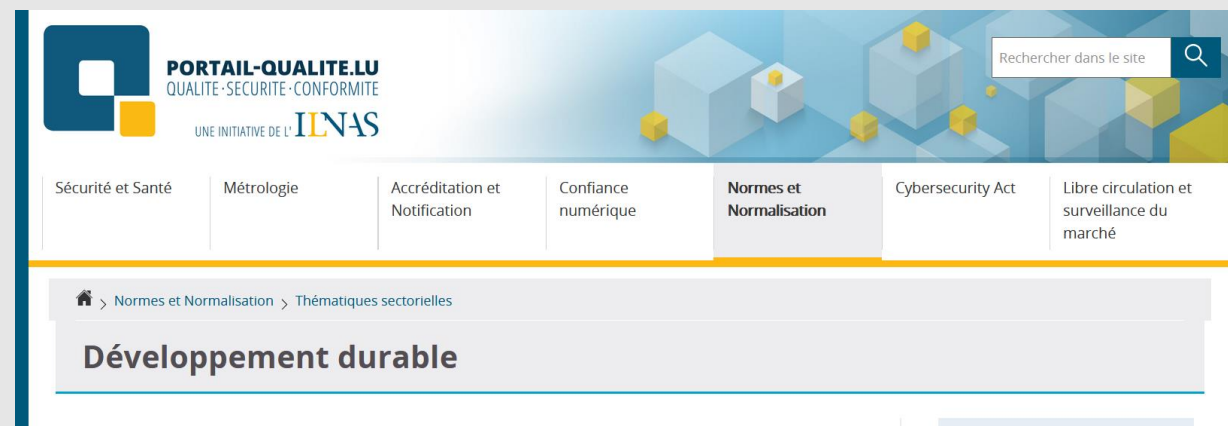

2

Reinforcing the valorization of standardization and the involvement of stakeholders in order to support sustainable development goals

- Identification of national needs in term of standardization
- Issue the identification of key-standards for each sub-axes
- Dissemination and promotion of normative informative to the stakeholders

- Follow-up of relevant technical committees
- Execute a regulatory watch, related to standardization
- Promote the involvement of national market to the different technical committees and the utilization of identified standards

#### Update of ILNAS' website to include sustainability

1

Promoting technical standardization

2

Reinforcing the valorization of standardization and the involvement of stakeholders in order to support sustainable development goals

- Identification of national needs in term of standardization
- Issue the identification of key-standards for each sub-axes
- Dissemination and promotion of normative informative to the stakeholders

- Follow-up of relevant technical committees
- Execute a regulatory watch, related to standardization
- Promote the involvement of national market to the different technical committees and the utilization of identified standards

■ **Meeting the national actors in the domain of sustainability and identified sub-axes**

- More than 50 organizations directly contacted
- Participation to 10 national events
- **In the future** : contact of governmental organizations

## 1 Promoting technical standardization

## 2 Reinforcing the valorization of standardization and the involvement of stakeholders in order to support sustainable development goals

- Identification of national needs in term of standardization
- Issue the identification of key-standards for each sub-axes
- Dissemination and promotion of normative informative to the stakeholders

- Follow-up of relevant technical committees
- Execute a regulatory watch, related to standardization
- Promote the involvement of national market to the different technical committees and the utilization of identified standards

### ■ Draft of standards packages on specific thematics

- [Sustainable Construction](#)
- [Circular Economy](#)
- [Hydrogen](#)
- [Sustainable Cities](#)

TECHNICAL STANDARDIZATION DATA SHEET – HYDROGEN – Version 0.4 – 05.04.2024	
<b>HYDROGEN</b>	
TECHNICAL COMMITTEES RELATED TO HYDROGEN TECHNOLOGIES STANDARDIZATION	
- International level -	
<b>ISO/TC 197 – Hydrogen technologies</b>	ISO/TC 197 is responsible for the standardization in the field of systems and devices for the production, storage, transport, measurement and use of hydrogen.
<b>IEC/TC 505 – Fuel cell technologies</b>	IEC/TC 505 addresses standardization needs in the field of Fuel Cell (FC) technologies for all FC types and various associated applications such as stationary FC power systems for distributed power generation and combined heat and power systems, FC for transportation such as propulsion systems.
- European level -	
<b>CEN/TC 408 – Natural gas and biomethane for use in transport and biomethane for injection in the natural gas grid</b>	CEN/TC 408 is dedicated to standardization of applications for natural gas and biomethane as fuel for engines and of biomethane for injection in the natural gas grid, including the necessary related methods of analysis and testing.
<b>CEN/TC 234 – Gas infrastructure</b>	CEN/TC 234 addresses standardization needs in the field of gas pipeline infrastructure for gaseous energy carriers (such as hydrogen, hydrogen-rich, and methane rich gases) and blends thereof from the input into the existing transportation networks up to the final connection of gas appliances.
<b>CEN/LEC/TC 6 – Hydrogen in energy systems</b>	CEN/LEC/TC 6 is dedicated to standardization in the field of systems, devices and connections for the production, storage, transport and distribution, measurement and use of hydrogen from renewable energy sources and other sources, in the context of the European strategy for the development and acceptance of the hydrogen market.

TECHNICAL STANDARDIZATION DATA SHEET – HYDROGEN – Version 0.4 – 05.04.2024	
<b>RELEVANT PUBLISHED STANDARDS ON HYDROGEN TECHNOLOGIES</b>	
<b>ISO/TC 197 – Hydrogen technologies</b>	
<b>ISO 14687:2019</b>	Hydrogen fuel quality — Product specification
<b>ISO 19881:2018</b>	Gaseous hydrogen — Land vehicle fuel containers
<b>ISO 19880 series</b>	Gaseous hydrogen — Fueling stations — <ul style="list-style-type: none"> <li>• Part 1: General requirements</li> <li>• Part 3: Valves</li> <li>• Part 5: Dispenser hoses and hose assemblies</li> <li>• Part 8: Fuel quality control</li> </ul>
<b>ISO 16111:2018</b>	Transportable gas storage devices — Hydrogen absorbed in reversible metal hydride
<b>ISO/TS 19883:2017</b>	Safety of pressure swing adsorption systems for hydrogen separation and purification
<b>ISO 22734:2019</b>	Hydrogen generators using water electrolysis — Industrial, commercial, and residential applications
<b>ISO 26142:2010</b>	Hydrogen detection apparatus — Stationary applications
<b>ISO/TR 15916:2015</b>	Basic considerations for the safety of hydrogen systems
<b>ISO 19882:2018</b>	Gaseous hydrogen — Thermally activated pressure relief devices for compressed hydrogen vehicle fuel containers
<b>ISO 13985:2006</b>	Liquid hydrogen — Land vehicle fuel tanks
<b>ISO 13984:1999</b>	Liquid hydrogen — Land vehicle fueling system interface

Currently under development : sale on ILNAS e-shop of standards package with competitive prices

1

Promoting technical standardization

2

Reinforcing the valorization of standardization and the involvement of stakeholders in order to support sustainable development goals

- Identification of national needs in term of standardization
- Issue the identification of key-standards for each sub-axes
- Dissemination and promotion of normative informative to the stakeholders

- Follow-up of relevant technical committees
- Execute a regulatory watch, related to standardization
- Promote the involvement of national market to the different technical committees and the utilization of identified standards

#### News and technical reports publication

« ISO et le Programme de Développement des Nations Unies tracent le sillon du développement durable pour les organisations »  
25/09/2024

« La normalisation pour s'assurer de la sécurité des installations hydrogène »

# Standardization in the field of circular economy

Breakfast “Technical standardization for a Circular Economy”

27 September 2024

Anika Ley

*Project officer – ILNAS/OLN*

## HORIZONTAL COMMITTEES

### ISO/TC 323: Circular economy

Scope

ISO/TC 323 deals with standardization in the field of Circular Economy to develop frameworks, guidance, supporting tools and requirements for the implementation of activities of all involved organizations, to maximize the contribution to Sustainable Development.

Standards

3

Projects

1

National delegates

12

### CEN/TC 473: Circular economy

Scope

CEN/TC 473 develops horizontal standards that address European specific prerequisites, legislation, and policy in the field of Circular economy. The standards aim to provide guidance, recommendations, requirements, methodologies and tools to implement, support and measure transition towards a Circular Economy at an organizational level. The deliverables aim to complement international and European standardization in the advancement in the transition towards a Circular Economy, while contributing to sustainable development.

Standards

0

Projects

0

National delegates

Sheet**

*To be published Q1 2025*

## ISO 59004

### Circular economy – Vocabulary, principles and guidance for implementation

#### WHAT?

##### First international definition:

“Economic system that uses a systemic approach to maintain a circular flow of resources, by recovering, retaining or adding to their value, while contributing to sustainable development.”

- *Resources can be considered concerning both stocks and flows.*
- *The inflow of virgin resources is kept as low as possible, and the circular flow of resources is kept as closed as possible to minimize waste, losses and release from the economic system*

##### PRINCIPLES that need to be taken into account

**Systems thinking** with a long-term approach

**Value creation** to better use resources in an efficient way

**Value sharing** Collaboration along the value chain or value network

**Resource stewardship** by closing slowing and narrowing resource flows

**Resource traceability** Be accountable for sharing information with interested parties...

**Ecosystem resilience** and contribute to the **regeneration of ecosystems and biodiversity.**

#### HOW?

##### ACTIONS that contribute to a circular economy to be implemented

###### Recover value

- Reverse logistics
- Cascading of material
- Recycling
- Waste management
- Material recovery
- Energy recovery

###### Create added value

- Design for circularity
- Circular sourcing
- Circular procurement
- Process optimization
- Industrial, regional or urban symbiosis

###### Regenerate ecosystems

- Removal of harmful substances, remediation of soil and water bodies, mitigation and adaptation to climate change impacts, protection of biodiversity

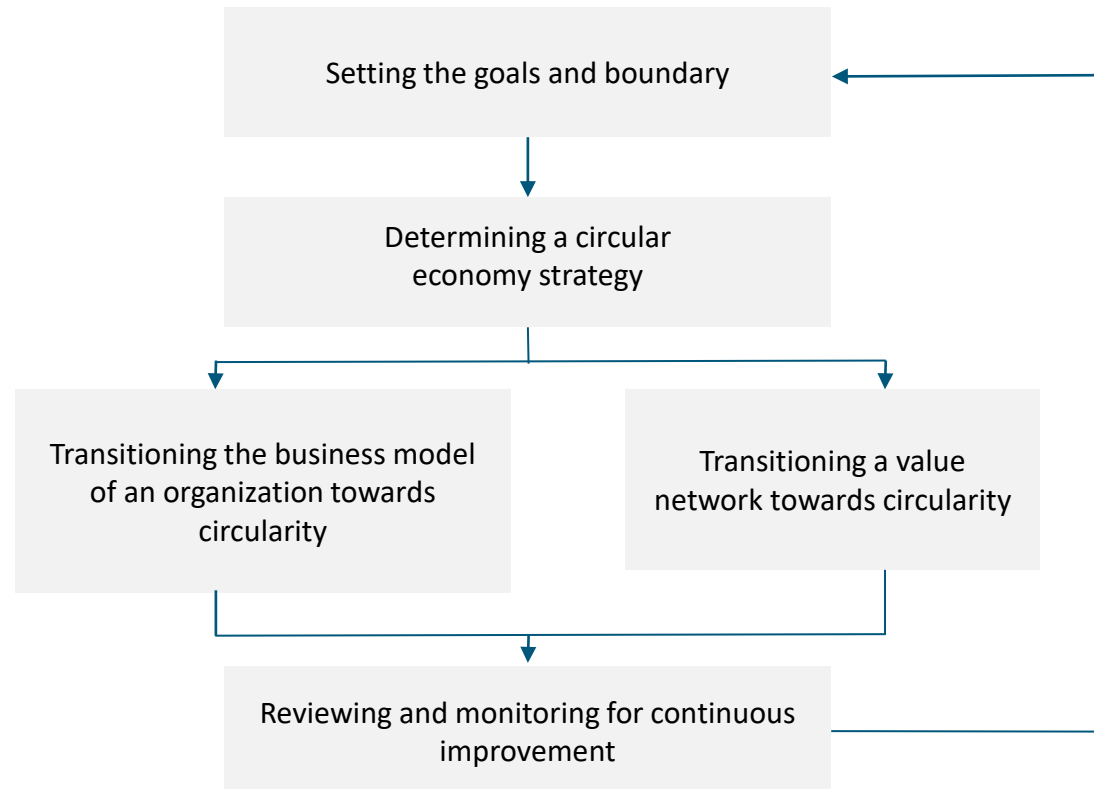

###### Retain value

- Reduce, reuse, repurpose
- Maintenance and repair
- Performance-based approaches
- Sharing to intensify use
- Refurbishing
- Remanufacturing

## ISO 59010

Circular economy – Guidance on the transition of business models and value networks

- Analyse the **current business models and value networks ...**
- ... through the **circular economy principles** and actions ...
- ... to transition to **circular business models.**

## ISO 59020

### Circular economy – Measuring and assessing circularity performance

- Provides a **structured approach** for organizations to **measure and assess their circularity performance**.
- **A framework applicable to multiple levels of an economic system**, ranging from regional, interorganizational and organizational to the product level.
- Aims to standardize the process by which organizations collect and calculate data, using mandatory and optional **circularity indicators**.

#### Monitor goals and actions

E.g. reduce, repair, reuse, remanufacture, recycle, ...

#### Measure resource flows

E.g. inflows, outflows, releases, losses, ...

#### Assess sustainability impacts

Social, environmental and economic impact and value

# ILNAS

# Circular economy

27th September 2024

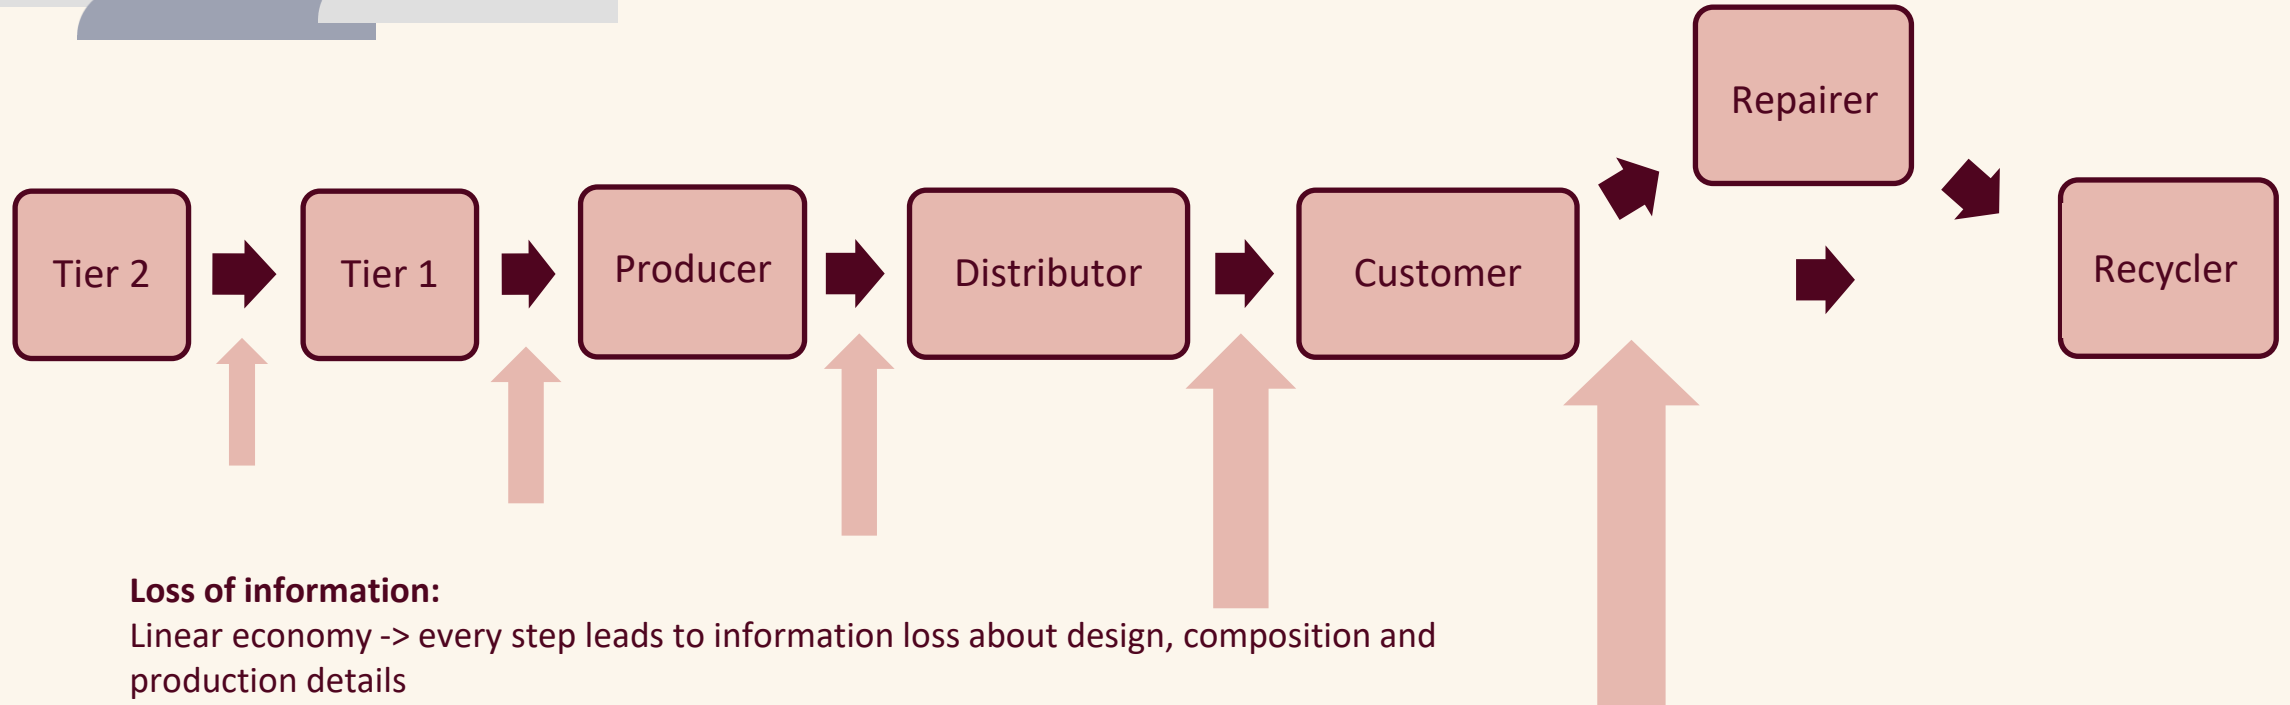

**ISO 59040 - Circular economy  
Product Circularity Data Sheet**

**ILNAS - Technical standardization for a  
Circular Economy**

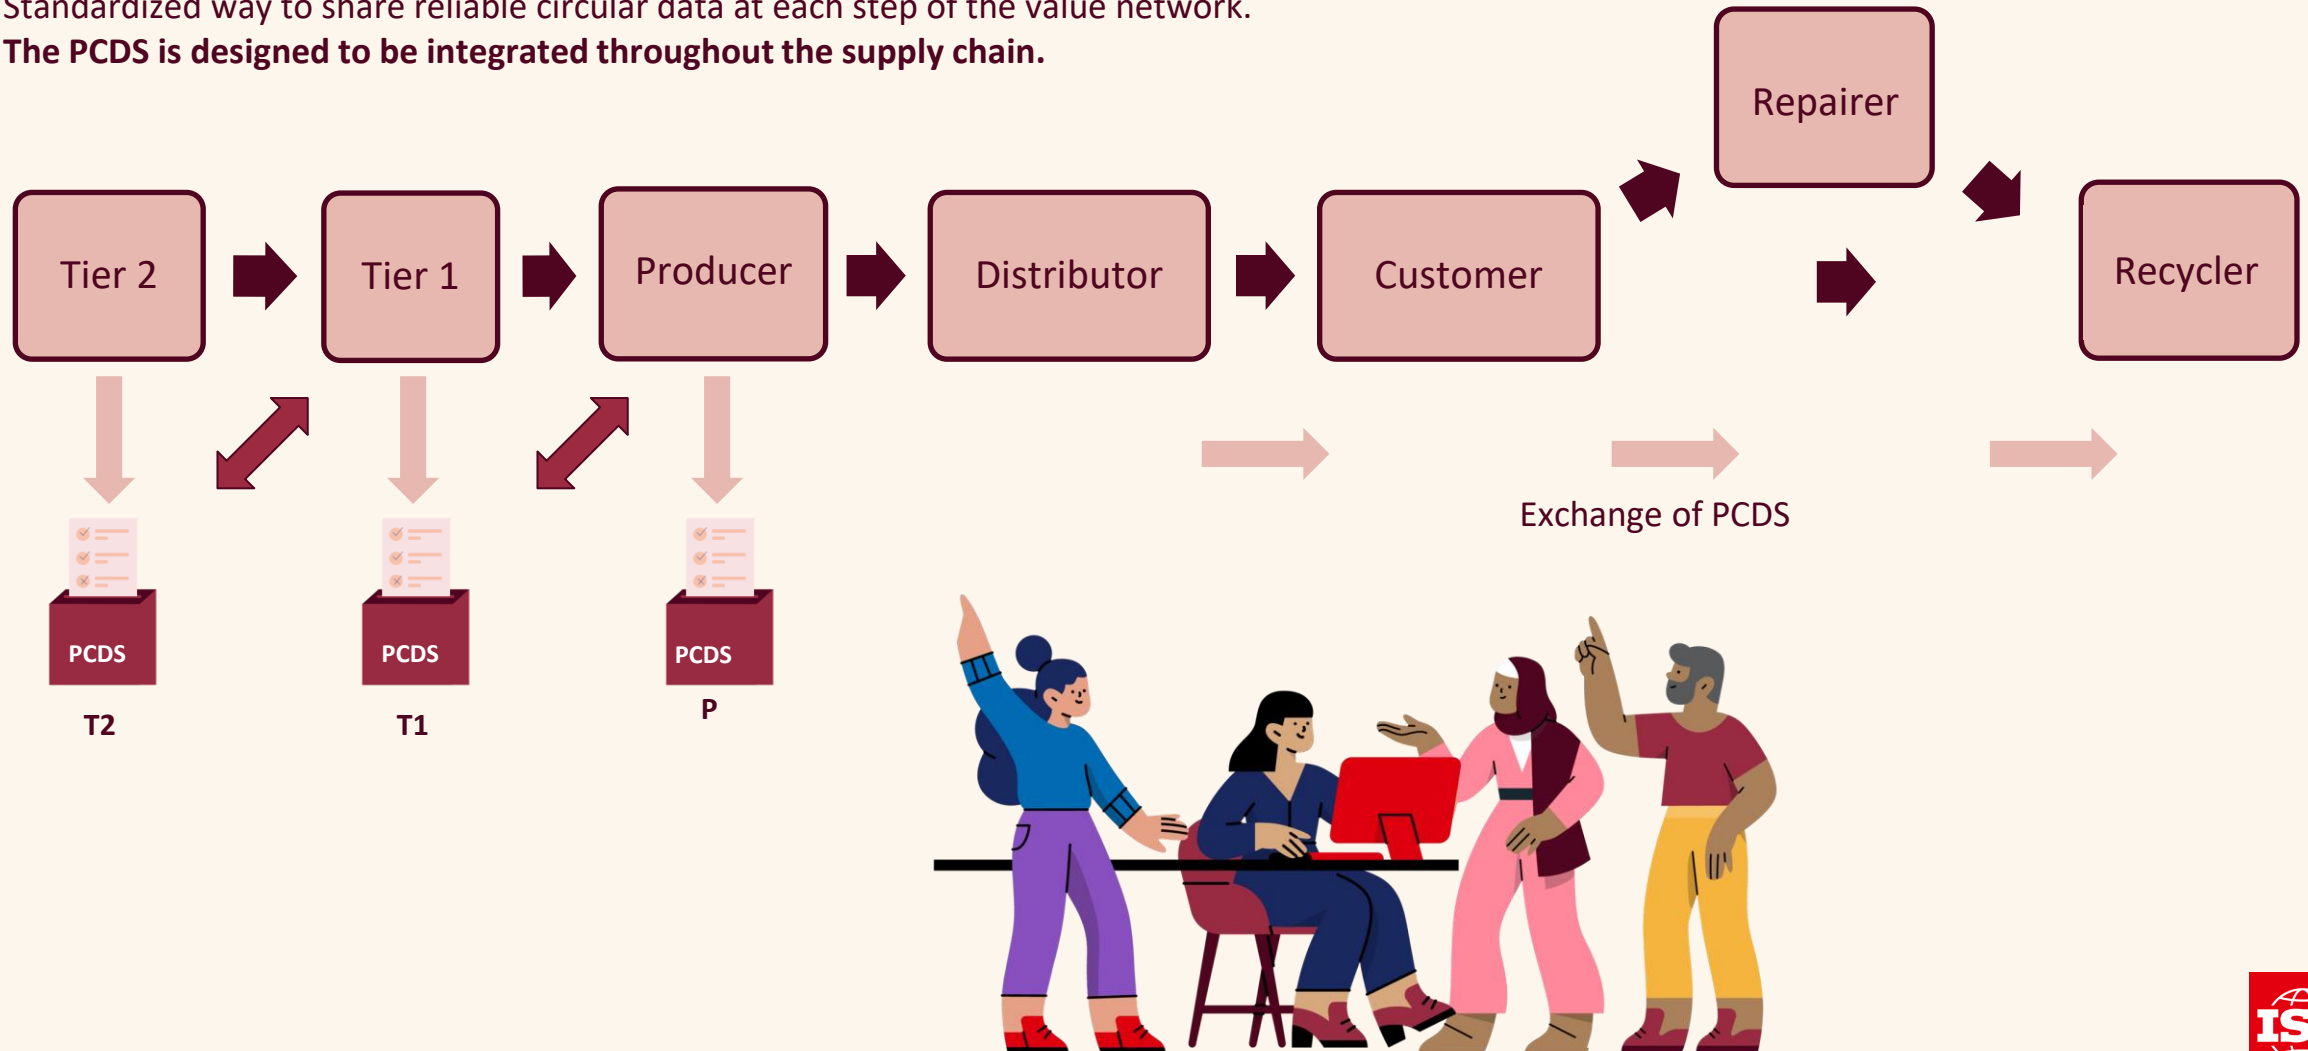

# Problem statement: Lack of data, difficulty to access the data

---

# Solution: Product Circularity Data Sheet

Standardized way to share reliable circular data at each step of the value network.  
The PCDS is designed to be integrated throughout the supply chain.

# Ease circular economy data exchange

## ISO 59040 in a nutshell

- ✓ Establishes a general methodology for **information exchange supporting the interoperability of circular economy related information**, based on the use of a product circularity data sheet (PCDS).

**Specifies requirements** for completing a PCDS by an organization, when acquiring or supplying products in order to permit **the exchange of circular economy related information** about those products.

**When establishing a PCDS, acquirer and supplier should consider a relationship strategy, plan and associated agreement to:**

- ✓ **General methodology**

- Identify circularity aspects for determined products and improve them
- Identify the value network
- Determine responsibilities
- Use of specification data fields
- Use of persistent identifier data fields

- ✓ **Specific requirements**

- Establish and maintain a PCDS Template including mandatory and additional statements:
  - Company and product information,
  - Material inputs,
  - Circular production,
  - Durability and extended lifetime,
  - Circularity at end of product use period,
  - Circularity benefit.

# Ease circular economy data exchange

---

ISO 59040 in a nutshell

---

## Main considerations and objectives

- Based on True / False (binary) statements
- Protection of confidential business information
- Use of unique ID's for interoperability across value networks
- Leverage machine readability
- Promotion of bottom-up information flow along with the product
- Mandatory statements applicable to any product regardless of the sector
- Focus is on Business-to-Business
- SME inclusive

# Example: What a PCDS contains

**Few statement examples of specific requirements**  
(not exhaustive list)

**Material inputs**

- The product contains no known hazardous substances according to the relevant cited reference standards or regulations
- The product composition is disclosed at the 100 ppm threshold
- The product contains 0% of reused parts
- The product contains 25-50 % of post-consumer recycled materials (mass fraction out of the total product mass)

**Durability and extended lifetime**

- Certified third party expert knowledge is required to conduct repairs of the product
- The product can be updated to extend its useful life
- The product is designed with reversible mechanical connectors for physical demounting
- 75-95% of the product is designed to be taken apart from the total product assembly

**Circularity at end of product use period**

- 0-10% of the product is known to be released into the environment during use
- 25-50% of dismantlable components can be either reused or recycled
- The product is designed for cycling in the technical cycle
- The product is not designed for industrial composting

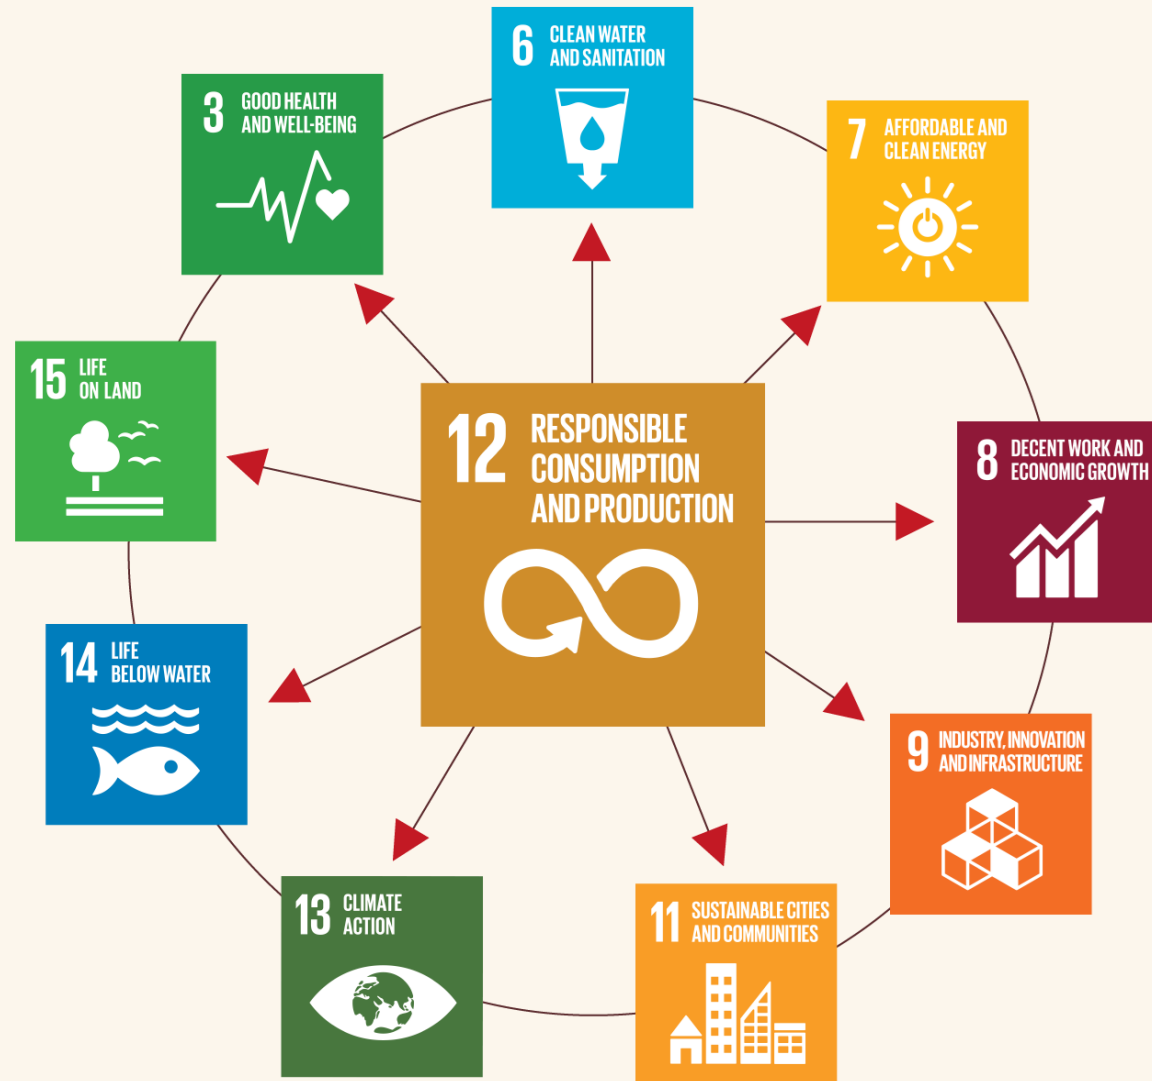

# Integrated view of circularity and sustainable development

**A circular economy system should contribute to sustainable development:**

The circular economy is strongly related to **SDG 12 Responsible consumption and production**...

...and can also have its roots in **SDG 9 Industry, innovation and infrastructure**.

# Thank you

Switch to alternative models to decouple the global economy from the consumption of limited resources...

**...Let's implement Circular Economy within our organizations!**

# **ISO 59040: DEFINITION OF A CERTIFICATION PROGRAMME FOR PRODUCT CIRCULARITY DATA SHEET**

## **INTRODUCTION TO THE WORK OF THE PCDS WORKING GROUP**

# PRESENTATION OF THE MEMBERS OF THE WORKING GROUP

Ministry of Economy  
ILNAS  
OLAS

Terra Matters GIE

Luxcontrol  
Seco  
Vinçotte

# ISO 59040 CERTIFICATION PROGRAMME

## I. INTRODUCTION

The certification programme has not yet been validated. The presentation below summarises the main points of the current working version.

## II. SCOPE OF APPLICATION

The aim of the certification programme is to describe the elements that will enable a competent third-party body to assess the conformity of the product circularity data sheets (PCDS) and their content.

## III. ACCREDITATION

Such third-party audits will be carried out by conformity assessment bodies accredited to ISO/IEC 17065 (requirements for bodies certifying products/processes/services) and/or ISO/IEC 17029 (requirements for validation and verification bodies) .

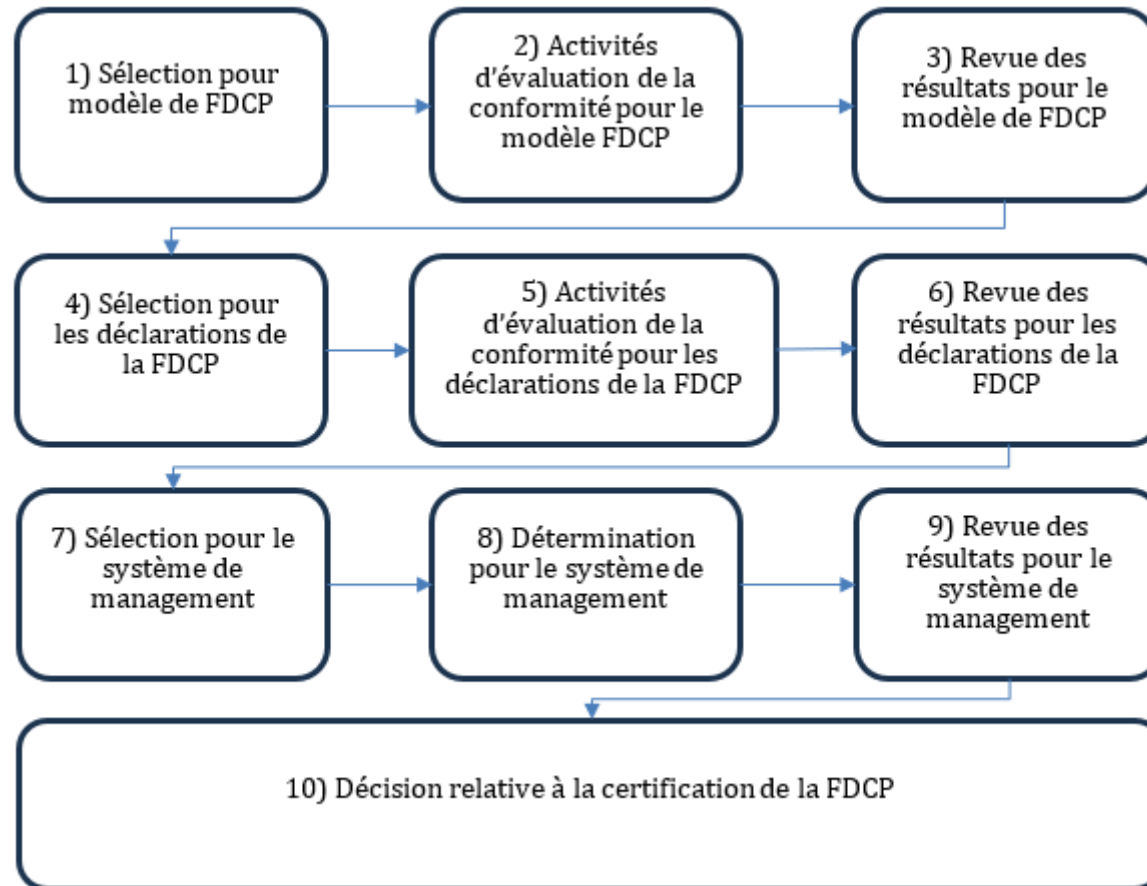

*The purpose of this certification programme is to provide the market with confidence, since a competent and impartial third party will have validated the accuracy of the declarations made by the manufacturer in a PCDS.*

# ISO 59040 CERTIFICATION PROGRAMME

## IV. THE CERTIFICATION PROGRAMME FOLLOWS SEVERAL STAGES:

If a non-conformity is raised during stages 3/, 6/ and 9, the process can be stopped.

# ISO 59040 CERTIFICATION PROGRAMME

**THE WORKING GROUP IS CURRENTLY DEFINING THE CONTENT OF THE FOLLOWING POINTS:**

## **V. ROLES OF THE PARTIES INVOLVED**

Description of the roles of the programme owner, certification bodies, accreditation bodies and customers

## **VI. PCDS MODEL REQUIREMENTS**

Specific requirements for the structure and elements of the PCDS model must be met in order to obtain certification.

## **VII. VALIDATION OF FDCP DECLARATIONS**

Verification that the information collected matches the answers provided for each declaration, using tests and documentary checks (on-site or remotely).

# ISO 59040 CERTIFICATION PROGRAMME

## VIII. GRANTING AND MANAGEMENT OF THE CERTIFICATION LICENCE

The licensing process, including the conditions of use of the certificate and mark of conformity, and measures to be taken in the event of misuse.

## IX. MONITORING AND CHANGES

Monitoring activities to ensure the ongoing compliance of certified FDCPs and the management of changes affecting certification

**THANK YOU FOR YOUR ATTENTION**
