**SMART ICT CHALLENGES
FOR
POST TELECOM**

It's about what our customers want...

AT LAST! AT LAST!

A Perfectly Reliable Acoustic Telephone.

A TELEPHONE THAT WILL WORK WELL OVER ANY ROUTE, REGARDLESS OF ANGLES.

A TELEPHONE THAT WILL WORK WELL IN ALL KINDS OF WEATHER, WIND OR RAIN.

A TELEPHONE THAT DOES NOT ROAR WHEN THE WIND BLOWS.

A TELEPHONE THAT WILL ADMIT OF SEVERAL INSTRUMENTS UPON THE SAME TRUNK LINE.

An Acoustic Telephone Central Office,

Adapted to switch one line with another, similar in effect to the electric system. This is attained by the SHAVER SYSTEM, and its practical utility demonstrated by its use by over 150 bona fide subscribers in New York City, who are paying rentals of \$2 to \$8 per month for the service.

TELEPHONES sold outright or rented in unoccupied territory. Send stamp for list of users and testimonials. It will pay you to investigate the truth of these statements, and secure an agency. Liberal discounts to agents, and satisfaction guaranteed or money returned. References.

To rapidly introduce our goods, we will, for the first line in any town, give a discount of sixty per cent. from our regular retail prices for Telephones, as given below, providing the purchaser will endeavor to secure us a reliable agent.

Retail prices Telephones each.....	\$10.00
Magneto Call Bells (not necessary).....	6.00
Wire per 100 feet.....	.25
Hangers for right angles.....	.25
Ordinary supports.....	.10

The SHAVER SYSTEM of Telephony has been in use by many business houses in this city for the past two years, gives universal satisfaction, and we cheerfully recommend it to those desiring such service.
—FRANK LESLIE'S PUBLISHING HOUSE.

POST Telecom M2M Services

POST Telecom has more than 1,000,000 SIMs on the road in Europe.

And sometimes ...

it's just about what you NEED...

POST & i-HeERO: Pan European eCall

Legend:

PSAP112 Emergency call centre 112

MSD minimum set of data

 Data connection

 Voice connection

The satellite indicates the precise location of the vehicle.

eCall
Immediately after the accident, the vehicle unit transmits the following data to PSAP 112: time and location of the accident, direction and number of passengers. The passengers may then communicate with the 112 line operator.

PSAP112
An operator of the 112 emergency number can see the location of the accident on the map as well as the data transmitted by the eCall system and communicates with the passengers. They ensure immediate sending of emergency units and forward information about the accident to the traffic information and management centre.

Unified Traffic Information System

VMS

TRAFFIC INFO

Integrated Emergency System
The emergency system sends units to the location of the accident.
